Summary

Computer Engineering student at AAST with hands-on experience developing and deploying machine learning applications using cloud services. Experience spans computer vision, NLP, predictive analytics, and experimental ML research, supported by a strong foundation in algorithms through competitive programming. Interested in Machine Learning Engineering, MLOps, and large language models.

Education

Arab Academy for Science, Technology & Maritime Transport University

Bachelor of Science in Computer Engineering

Alexandria, Egypt

Sep 2022 – Feb 2027

CGPA: 3.98/4.0

Relevant Coursework: Probability & Statistical Analysis, Artificial Intelligence, Data Analytics and Optimization, Database Systems, Object-Oriented Programming, Data Structure & Algorithms, Distributed and Parallel Systems.

Experience

Machine Learning Engineer Intern – Digital Egypt Pioneers Initiative

Jun 2025 – Dec 2025

- Completed a 180-hour applied ML program covering computer vision, NLP, data engineering, and cloud deployment.
- Built and deployed machine learning pipelines for computer vision and predictive analytics tasks, managing the full workflow from data preprocessing and feature engineering to model serving on **Azure Machine Learning** and **Azure App Service**.
- Developed NLP pipelines for text classification and sentiment analysis, applying Transformer-based models to real-world text datasets and managing artifacts on **Azure Blob Storage**.

Projects

Premier League Predictor – End-to-End MLOps System

- Built an end-to-end MLOps pipeline with **ZenML** to train and deploy an **XGBoost** model predicting Premier League outcomes through a **Streamlit** dashboard.
- Integrated **MLflow**, **AWS S3**, **PostgreSQL**, **Docker**, **AWS EC2/ECR**, and **cron** for experiment tracking, model registry, deployment, and automated weekly evaluation.

FPL Vision – AI-Powered Fantasy Premier League Assistant

- Built a full-stack web assistant for Fantasy Premier League managers, generating player recommendations and expected points projections using a trained **XGBoost** model.
- Processed data from the FPL API (700+ players, 20 teams) and deployed the application on **Azure App Service** with **Azure Blob Storage** and **GitHub Actions CI/CD**.

Facial Recognition System

- Built a FaceNet-based facial recognition system achieving **98%** accuracy using transfer learning and MediaPipe multi-face detection.
- Deployed the Dockerized **Streamlit** application on Hugging Face Spaces.

Skills

Programming Languages: Python, C, C++, C#, Java, SQL, Bash

Cloud & DevOps: Microsoft Azure, Amazon Web Services, Git, GitHub, PostgreSQL, huggingface spaces, Linux

Deployment & MLOps: ZenML, MLflow, Docker, CI/CD, GitHub Actions, Kubernetes

Certificates

Second Place In HackerRank x CPCLub AAST Event	Apr 2026
Codeforces Specialist (max rating: 1448)	Nov 2025
ARTIFICIAL INTELLIGENCE ENGINEER 1 (Coursera – IBM)	Oct 2025
Sprints x Microsoft Summer Camp – AI and Machine Learning	Oct 2025
ECPC (Egyptian Collegiate Programming Contest) Qualifications	Jul 2025
15th Place in Zindi Financial Inclusion in Africa Competition	Jun 2025
IBM Software Developer Roadmap (Coursera – IBM)	Oct 2024
IEEEExtreme Programming Competition	Oct 2024
• Ranked in top 2% in the Egyptian region and in top 20% worldwide from over 8000 teams.	

Volunteering

AWS Student Builder Group at AAST - Team member	Mar 2026 - Present
• Participated in organizing several cloud practitioner training sessions. • Lead a workshop on different AWS services for 20+ students.	
AAST Competitive Programming Club – Coach	Sep 2025 – Present
• Led 15+ tutoring sessions explaining competitive programming fundamentals and algorithms. • Monitored and coached a group of 30+ students. • Contributed in preparing materials and contests for trainees.
